IT Infrastructure | Information Security

SINCE 1990

ENTERPRISE SECURITY ARCHITECTURE

Corporate Protection for Information Security

PEOPLE

PROCESS

TECHNOLOGY

- **InfoSec Strategy and Framework**
- **Security Governance & Management**
- **Risk & Vulnerability Management**
- **Event Monitoring & Response**
- **Standards & Compliance Management**
- **Incident Handling & Recovery**

Common Information Security practices are generally limited to the implementation of technologies in the IT department. People and processes are often ignored and thus the objectives of InfoSec are not achieved. This also generates a false sense of corporate security.

ESA provides a holistic approach to Information Security, thus allowing the interconnection of various component of policies, procedures and technologies to work together to achieve the InfoSec goal. It requires the participation of end-users, top management and IT team enabling to work together to meet the requirements.

Addwise was established in the year 1990 and is providing consulting services for assessment and designing of **IT Infrastructure and Information Security Architecture**. The company has worked with many national and multitnational organizations and is recognized for the professional and timely delivery of services.
